

FILTHOUN^{AA}

Reusable Plastic Filter Housing

Our reusable Filter Housing is designed to be easy to install and maintain. Compatible with our Carbon Block (FILTCAR) and Nanofilter (NANOF) candles, the FILTHOUN has many impressive features. Eco friendly and cost-effective, the housing can be reused multiple times, ensuring you get the most out of it before replacing.

Component Breakdown

Valve Head

Cuts off the influent water flow when the head is disconnected from the lid / body. Allows for safe and easy filter candle replacement.

Screw Top Lid

Securely screws on to the filter body and the valve head creating a watertight seal. When removed from the valve head, water flow stops.

Filter Body

Made of durable plastic, the filter body acts as a container for filter candles. Compatible with both our Carbon Block and Nanofilter candles.

How Does It Work?

When installed, the valved Filter Housing acts as container for our Filter Candles. When dispensing, water flows into the housing from the left hand side where it passes through the filter candle. Once the water has passed through the candle, it then leaves the housing through the right hand side of the head, continuing on its journey to the dispenser.
